Voice Mobility Announces the Addition of ROI Networks to its Distribution Network

VANCOUVER, BC, CANADA – May 28, 2008 – Voice Mobility International, Inc. (TSX: VMY, OTCBB: VMII and FWB: VMY), a Vancouver-based developer and provider of carrier and enterprise messaging solutions, today announced the addition of ROI Networks as a certified reseller of the Voice Mobility solution set.

ROI Networks is a systems integrator focused on communication solutions that enable their customers and partners to succeed. These solutions are centered on their customer's business needs and are intended to improve communication throughout the enterprise, while providing quantifiable business results.

Results are the key at ROI Networks. "In the nearly 25 years that I have been involved in this industry, with leaders such as Avaya and Cisco, I have witnessed many changes", noted ROI President and CEO Jeff Hiebert. "What hasn't changed is that customers still want customer specific solutions not a one size fits all approach, they want to be helped not just sold what their vendor carries and finally, when they do buy, they want to buy from a partner who will provide them a solution with a quantifiable payoff not just a payback."

"Voice Mobility will be providing ROI Networks our full portfolio of messaging and unified communication solutions. We are enabling ROI to fulfill their charter. Simply put, ROI can now propose a truly unique set of reliable, supportable, cost effective highly scalable, Linux or windows based messaging and call processing applications. VMI features include presence and IM, CTI, Screen Pops, IVR, emergency notification, lodging and other crucial applications required by the market. These applications can now be delivered by ROI in a single, cost effective package to their select customer base", said David Ballins, US Channel Director, Voice Mobility.

ROI is a Gold Avaya Business Partner servicing and providing managed services offers to customers in the Southern California area and around the world. ROI understands the importance of providing their customers best in class communications technology. They represent solutions from industry leaders such as Juniper Networks®, Extreme Networks® and Microsoft®. "Having VMI's software solutions for our customers and potential customers changes the landscape for ROI Networks. We will be able to deliver on customer specific needs and drive costs out of our services model like never before due to Voice Mobility's wide range of functionality, low cost of implementation and ongoing support" said, Paul Jones, CTO for ROI Networks.

"Partnering with ROI Networks speaks volumes about our growth and the overall acceptance of Voice Mobility's suite of software solutions in the UC market space", said Mike Seeley, VP of Global Sales, Voice Mobility. "We view the addition of ROI to our business partner

network as validation that our strategy of delivering scalable, feature rich Linux and Windows based solutions is what customers want.”
